

GeoAI

For everyone, everywhere

Turn spatial questions into validated maps, analysis, reports, and reusable geospatial workflows.

GriidAi helps you plan and run geospatial analysis and workflows, while you review the analysis steps, check map results, and decide how to interpret them.

HOW IT WORKS

Ask

Describe your spatial question in natural language

Plan

GriidAi creates a structured analysis plan and workflow

Execute

Workflow runs across tools, data and AI models

Validate

Human + AI validation for quality and trust

Reuse

Save, document, and reuse workflows across projects

Built for geospatial work across disciplines

GIS & Geospatial Professionals

Run spatial analyses and create reusable workflows

Software, AI & Engineering Professionals

Bring location data and spatial analysis into applications and projects.

Students & Researchers

Investigate GeoAI and spatial questions with visible data and steps.

Teams and Organizations

Standardize GeoAI and geospatial methods and improve consistency across projects

WHAT GriidAi DOES

Spatial Engineering - Vector Analysis - Raster Analytics - Spatial Intelligence
Mapping & Visualization - Data Discovery & Preparation - Reports & Insights

WHY TEAMS CHOOSE GriidAi

- ✓ Natural-language interaction
- ✓ Human-in-the-Loop validation
- ✓ Reusable Intelligence
- ✓ Connected data and tools
- ✓ Sustainable AI

GriidAi Ecosystem

Community & Growth Partners	➤ Create content, engage communities, and introduce new users and collaboration opportunities
Contributor Program	➤ Create geospatial tools and reusable workflows. Share your expertise, build recognition, and explore future monetization opportunities.
Academic & Education Partners	➤ Bring GriidAi into teaching, research, and student projects through workshops and educational collaboration
Reseller & Solution Partners	➤ Help organizations adopt GriidAi through sales, implementation, integration, training, and support
